NeuroTechnology™ Treatment

Restores Hearing Clarity & Overcomes
Shortfalls of Traditional Hearing Aids

NeuroTechnology™

NeuroTechnology™: The Most Advanced Hearing Loss Treatment Technology, Ever.

We hear with our brains, not just our ears!

NeuroTechnology™ is designed to treat hearing loss by using complex stimulation patterns to help replace diminished auditory input to the brain. Traditional hearing aids just make things louder, but with today's new NeuroTechnology™ treatment options you can hear more clearly and more naturally in all listening environments.... even in noisy restaurants!

NeuroTechnology™ includes the following features:

- Enhanced Clarity – to help fill in the missing speech details
- Noise-Cancellation - to help filter speech in noisy environments
- Soft-Speech Booster – to help you hear the 'soft-speakers' in your life!
- Surround Sound - hear the conversation 360 degrees around you
- Bluetooth connectivity to your smart devices

How Does NeuroTechnology™ Work?

There are different types of NeuroTechnology™ - each custom designed and programmed to meet your hearing loss and your hearing needs. Ultimately, each is built to perform the same function: to help you hear more clearly, and more naturally, in all listening environments.

Because we hear with our.... BRAINS, not with our ears, today's NeuroTechnology™ is the only proven hearing loss treatment option that focuses on enhancing brain function by providing enhanced clarity surround sound with background noise canceling capabilities.

NeuroTechnology™ can be used to address the full spectrum of hearing difficulties, from people with audiometric 'normal hearing' that have difficulty processing in noisy situations, all the way to individuals with severe to profound hearing loss.

NeuroTechnology™ Options for Treating Hearing Loss:

Invisible Treatment Options: Once placed in your ear, it's hassle-free so that you may even forget you're wearing the device! And that's the point. Hearing loss shouldn't hold you back, and neither should your hearing solution. Features in today's invisible technology options include:

- An invisible and custom fit
- Hearing devices fit deep inside your ear canal and are personally customized to you for all-day comfort

- Easily adapt to new sounds with automatic volume control and adaptation to listening environment
- Wireless streaming to your smartphone and/or to keep you connected to your TV, music and other media
- Sound comfort technology designed to provide distortion-free listening comfort for loud sounds while ensuring ultimate ability to hear the speech details of conversation.

Mini 'Receiver in The Ear' Options:

Groundbreaking NeuroTechnology™ is fast and precise enough to analyze and follow the dynamics of the entire auditory environment and differentiate between speech and background noise. Advances in miniaturization of technology have led to the breakthrough of new NeuroTechnology™ proven to support brain function including working memory, selective attention and processing speed (The Hearing Review: Dr. Desjardin, University of Texas, El Paso). These new devices have 3 features designed specifically to maintain the brain's innate ability to hear in all different listening situations:

- **Clear Hearing In Background Noise:** by separating important speech from background noise by as much as 10dB, this new technology provides 30% better speech understanding and clarity in noise.
- **Enhanced Clarity = Enhanced Memory Recall.** Individuals with hearing loss are known to have reduced memory recall because the brain is deprived of a clear signal. With 20% more capacity to remember, this technology is the only available option proven to increase memory recall.
- **Reduced Effort:** many of my patients explain that hearing requires effort as they age and that it can make them tired after

a day at work or with the grandchildren. Current available technology is proven to provide a 20% reduction in listening effort in noisy environments.

In addition, some options include Bluetooth and internet-compatible options that enable:

- Hands-free wireless (surround sound) hearing on the phone.
- Low-Battery reminders – devices can remind you by ear, phone, text or email that your batteries (or your spouse's batteries) are low.
- Wireless compatibility with any TV to enhance the clarity of the signal.
- Allows for control of your Internet-connected devices at home including the thermostat, lights and even certain cooking appliances (yes, your hearing devices can automatically turn on your coffee maker each morning!)
